Part I

Technical Details

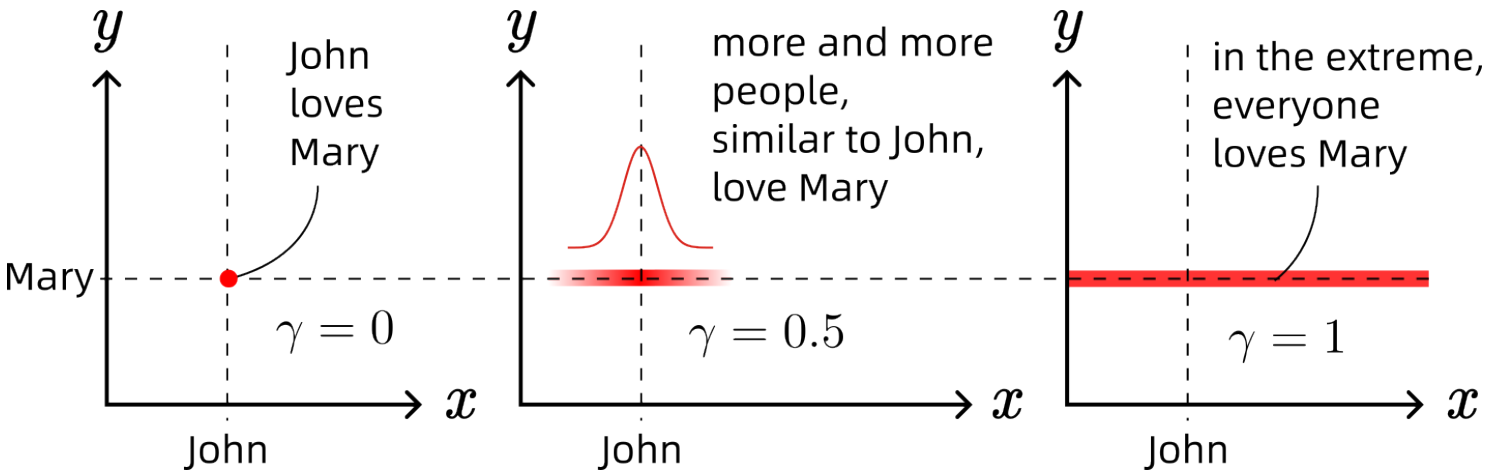
How is AGI different from LLMs?

- Reinforcement learning is like a loop. Its "knowledge" changes slowly over many cycles. Think of it like a washing-machine rinsing out dirt in the clothes.

- Over many cycles, the knowledge in the machine gets more and more correct, removing internal contradictions.
- This is how to solve the problem of **hallucinations**.
- LLM: more bulky AGI: more compact

Logic Transformers

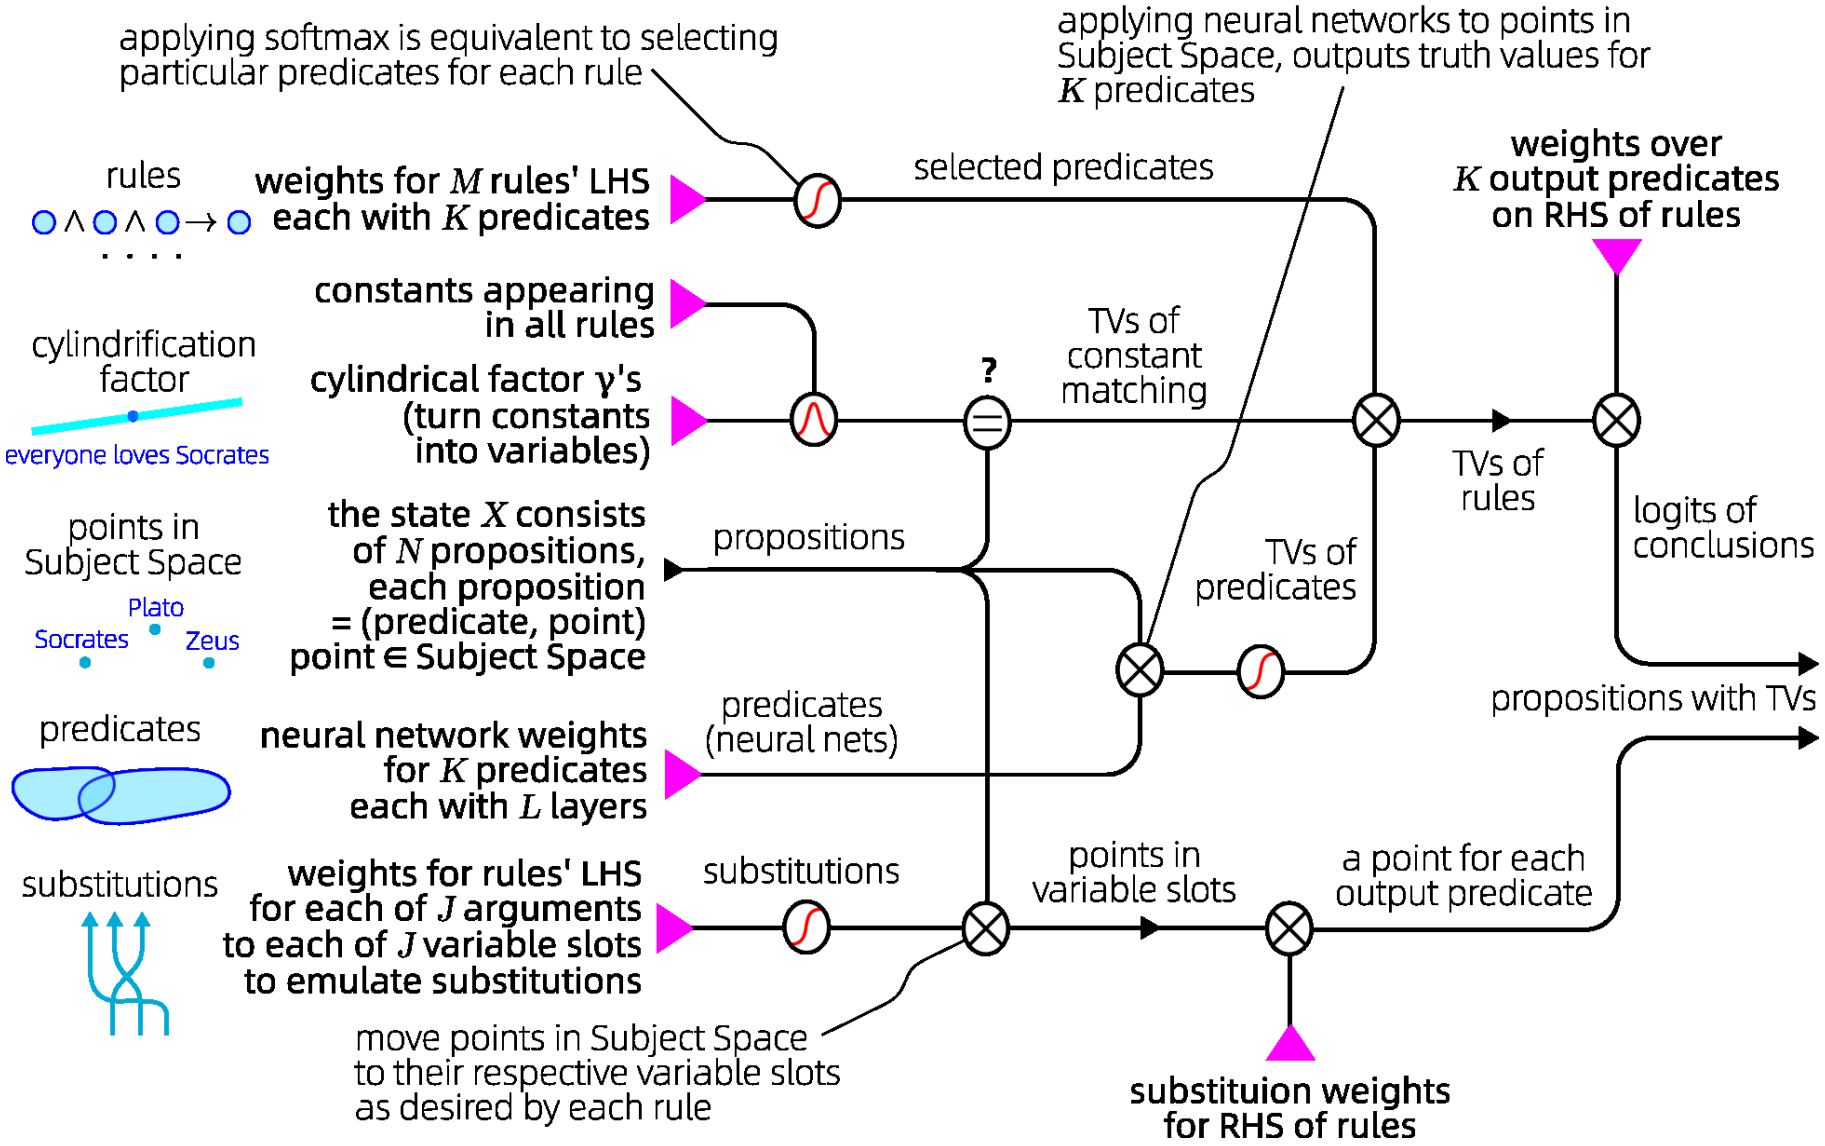
- Differentiable.
- Cylindrification factor.



(1)

- I was in quite a celebratory mood, as you can see.
- The source code is open under Creative Common license, so you can ask Copilot whether our project has genuine original value

LOGIC TRANSFORMER



Part II

Political-Economic Analysis

The AGI ethics problem is even harder than AGI

- 其實關於今次這個項目申請的最大問題是：好多人認爲香港搞 AGI 冇出路，因爲這領域被美國壟斷
- 很多香港人亦自我認同某特定的角色，就是吃美國吃剩的「麪包碎」
- 當然，知道一個問題的存在，並不表示一定能改變它
- 是以很多香港人漸漸潛移默化而形成了種族自卑（很多時不自覺的）
- 問題關鍵是：究竟有沒有出路？路徑是否存在？
- 而這牽涉的問題是：中國是否必然趨向落後？
- 落後的定義是：民衆的思想與「真實」之間的距離。落後國家的特點是人民思想迷信，浪費時間在低效率的消耗上
- 古代文明到了今天衰落，這似乎不是生物界或 DNA 的現象，而是文化上的現象，是存在於人們的思想裏；能改變思想則不會落後

Testing

- 美國霸權 令 香港冇啖好食 → 務必消除種族歧視，乃大勢之所趨
  Under the American hegemony of high tech,
- Curse of backwardness: 中國無法改革之迷思 → 落後的解決方案
