Part I

Technical Details

How is AGI different from LLMs?

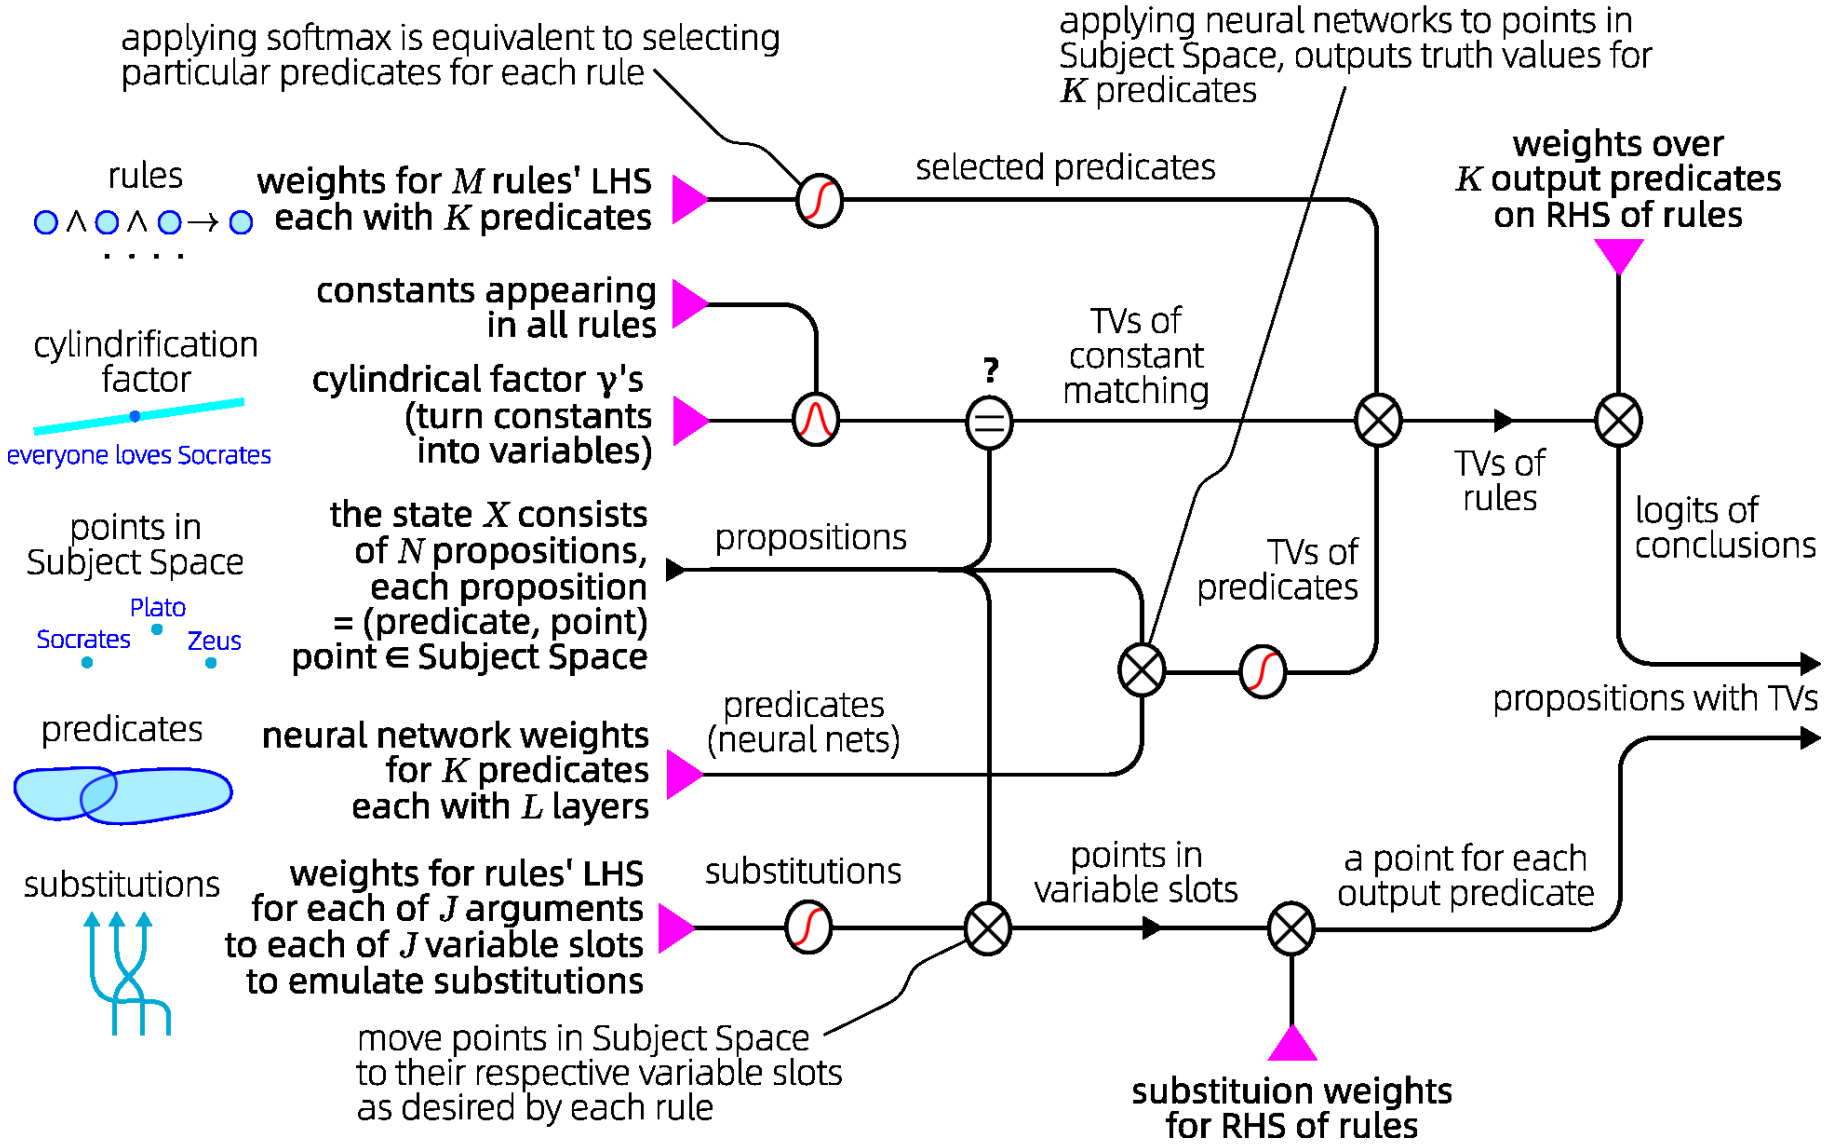
- Reinforcement learning is like a loop. Its "knowledge" changes slowly over many cycles. Think of it like a washing-machine rinsing out dirt in the clothes.

- Over many cycles, the knowledge in the machine gets more and more correct, removing internal contradictions.
- This is how to solve the problem of **hallucinations**.
- LLM: more bulky AGI: more compact

Logic Transformers

- Differentiable.
- Cylindrification factor.
- I was in quite a celebratory mood, as you can see.

LOGIC TRANSFORMER



Part II

Political-Economic Analysis

The AGI ethics problem is even harder than AGI

-
-
- AGI
- anchor
- Metamorphosis
- The curse of backwardness
- American empire
-
